

RUBBER NON-SLIP DISC

Rubber magnets are the ideal product in case of risk of scratches or marks on the surfaces to which they adhere. The special rubber disk allows a better seal on smooth surfaces, to avoid slipping.

During use it's recommended to respect the maximum operating temperatures indicated in the [Material data sheet](#).

All measurements are in millimeters. Other sizes and shapes on request.

The strength of attraction is purely indicative and it could be different depending on the type of application and assembly.

The [magnetization](#) is axial. Other kind of magnetization on request.
